DOMOTIC AND LIVING

Domotic is not an option for the future but a possibility for today's home.

The expectations we place in homes today are different and more complex than in the recent past: the house is not only the place of family relationships but also the mirror of those who live there.

At the center is the man with his needs, wants and needs. Digital technology responds to this idea through solutions that offer relaxation, comfort, security and communication.

This is the domotic: unlike traditional electrical systems, conceives of the home and interiors placing at the center on the welfare of all in daily domestic life.

By design the domotic system to install is not just decide the position of the lights, sockets and controls, but also to determine levels of safety, comfort, energy efficiency and usability.

some examples:

intrusion detection, gas leaks, flooding, fire starts that are reported even when no one is home, making the home safest;

with sudden weather changes that can cause damage to blinds, front components or windows, the wind sensor automatically closes roof windows, blinds and shutters;

with a few devices you can manage and control parameters such as lights, scenery, climate and air quality that improve comfort, making it more rational energy use;

presence detection sensors, light sensors and devices dimmer to adjust the light intensity can reduce power consumption by constructing scenarios of life;

choose different settings for temperature control that interact with the climate control system allows you to increase the comfort saving energy;

program the activation of home appliances in times when energy consumption is most economical, it allows a conscious use of resources.

TOUCH SCREEN CONTROLS
To check all MY HOME functions from a single point.
Easy and intuitive

TOUCH CONTROL
A light touch to operate any function of implementation and control

WEB SERVER
For remote control from a PC or PDA web pages through the internet and of all domestic functions

ENERGY SAVINGS
MY HOME pays great attention to the environment and the intelligent use of energy resources. It allows you to control consumption and to manage temperature control and air conditioning throughout the house, modulating the temperature in different

SECURITY
MY HOME makes the home more safe and secure, even when you are not at home. It allows you to prevent intrusions, to defend against domestic threats and incidents such as gas leaks, flooding, electrical black outs, activating in case you need the appropriate counter-measures

COMFORT
MY HOME simplifies and improves the quality of home life. For example it allows to automate blinds and shutters, centralize turning on lights, diffuse sound and music in the house, adjust the temperature, control irrigation, and activate different automatisms

JUST a TOUCH.

With our TouchControl technology, simply tap the display with your fingertip to access each control. This sensory magic, which is also used on the iPod, effortlessly detects the movement of your finger on the display.* As you move closer to touch it, the multi-coloured indicators gently glow into life. As the icons light up, room temperature and lighting levels can be finely adjusted until they are just to your liking.
